Endovascular treatments of PAD: tips and tricks on new devices and techniques

Monday 6 and Tuesday 7 June 2016

Clinique des Grangettes
7, chemin des Grangettes
1224 Chêne-Bougeries

Dear colleagues,

We are pleased to invite you to the «Endovascular treatments Workshop» which will be held in the Clinique des Grangettes. In the last decade peripheral endovascular interventions have increased worldwide. Thank's to new devices and especially new revascularization techniques, complex and very complex lesions are more and more treated percutaneously. Endovascular approaches are nowadays considered as a first line treatment option in many centers, and surgery is reserved only in the case of endovascular failure.

The aim of this workshop is to :

- Get essential tips and tricks of complex peripheral interventions from medical and cath-lab personnel's point of view
- Discuss on endovascular material and techniques in order to safely and efficaciously start or improve an endovascular activity
- Discuss new techniques and dedicated devices used to treat complex TASC C-D lesions

Robert F. Bonvini M.D., interventional cardiologist and angiologist at Clinique des Grangettes, will first abord theoretical aspects and organise a cath-lab visit with a peripheral material review and with a first endovascular case. On the second day, you will assist to 5 peripheral interventions done by Robert F Bonvini M.D.

This conference is opened to interventional radiologists, cardiologists, angiologists and vascular surgeons. We look forward to welcome you at Clinique des Grangettes.

Robert F. Bonvini M.D.

Program

Endovascular treatments of PAD: tips and tricks on new devices and techniques

Monday, June 6th

12 h 00 Welcome

12 h 30 Workshop presentation and lunch

13 h 30 Cath-lab visit and discussion :

- Patient's installation and preparation
- Dedicated materials to each specific intervention

14 h 00 First endovascular case

16 h 00 Presentations : Robert F Bonvini M.D.

- Endovascular treatments of intermittent claudication
- Endovascular treatments of critical limb ischemia
- Endovascular treatments of acute limb ischemia

18 h 00 Case discussion of the next day cases

18 h 30 Closure of day 1

Tuesday, June 7th

8 h 00 Meet-point Cath-Lab

8 h 30 First scheduled case

10 h 00 Second scheduled case

11 h 30 Third scheduled case

13 h 00 Lunch

13 h 30 Fourth scheduled case

15 h 00 Round table discussion
Take home message
Conclusions

15 h 30 Closure of the workshop
